This RFP provides basic information regarding the County's requirements. Services which are not specifically requested in this RFP, but which are necessary to provide the functional capabilities proposed, shall be included in this submittal.

The words "Contractor", "Vendor", "Bidder", "Offeror", "Consultant", "Proposer", are used interchangeably throughout this RFP to define the companies submitting proposals.

The Proposer is responsible for clarifying any ambiguity, conflict, discrepancy, omission, or other error in the RFP or it shall be deemed waived.

The County reserves the right to reject any and all proposals; to waive any informality or irregularity not affected by law; to evaluate, in its absolute discretion, the proposals submitted; and to award the contract based on the established criteria and according to the proposal which best serves the interest of the County.

A proposal received by Spartanburg County is considered a public document under provisions of the South Carolina Freedom of Information Act (FOIA) unless it contains information that may clearly be considered accepted and excluded from disclosure according to State statute. All information that is to be considered confidential and/or proprietary must clearly be identified, and each page containing confidential and/or proprietary information, in whole or in part, must be stamped as **CONFIDENTIAL**, in bold font of at least 12-point type, in the upper right hand corner of the page.

The Spartanburg County Sheriff's Office consist of approximately 300 sworn officers and 30 support personnel who provide law enforcement related functions within the boundaries of Spartanburg County. The Sheriff's Office consist of 4 divisions (uniform patrol, special services, administration, and criminal investigations) and several sub divisions. The intent of this project is to provide approximately 200 units with a mobile device (laptop computer) mounted in a vehicle with the ability to send and receive data through a commercial air card. The initial goal is to have field based reporting software and the ability to retrieve information from several data bases already available. State queries, local wants & warrants, in-vehicle mapping and silent dispatch are also software systems desired at some phase of the project. The service provider is expected to provide a quality product at a fair price with the support to back their services.

Scope of Work/Services Provided

The awarded Contractor shall perform and carry out in a good, clean, and professional manner, those services necessary to complete the Spartanburg County Sheriff's Mobile Data Terminal Project. At a minimum, this work shall include:

Spartanburg Sheriff's Laptop Requirements:

- Ruggedized or Semi- Ruggedized
- Windows XP upgradable to Windows 7
- Touch screen
- 120 Gig Hard Drive or more
- 2.4 GHz Duo Core processor or faster
- 4 GB Memory
- DVD – RW
- 4 hour battery life or longer
- Spill R
- Spill Resistant Keyboard
- Backlit Keyboard
- Vibration protection
- Shock Mounted Hard Drive
- Dust Resistant
- Integrated Mobile Broadband
- Dock Mountable
- LCD Suitable for viewing in Sunlight

Optional:

- Integrated GPS receiver able to work with mapping program to provide unit location

Mounting Solution:

- In-car mounting solution which will work with the approved lap top. The mounting hardware must be well made, rugged and solid as to eliminate or dampen vibration from normal vehicle operation. It must also work with current configuration of standardized police patrol vehicle and have a broad range of flexibility for comfort of use. (Current configuration includes Jotto Desk center console mounted in Ford Crown Victoria/Chevy Tahoe or Dodge Charger)
- Docking Station/port replicator – this piece will need to be able to secure the laptop to the mounting hardware with a locked mechanism. It will also need to work with the approved laptop and provide external ports for power, and other external devices deemed necessary.
- Power unit – will provide power from the vehicular power system to functionally run the lap top computer without draining resources or hindering other devices already installed on unit.
- External Antenna – used for the transmission and reception of data through a mobile broadband application.

Software:

- ⇒ **Silent Dispatch** – This component will connect the mobile computer in the vehicle to the Motorola Computer Aided Dispatch (CAD) system at 9-1-1. A properly implemented & integrated silent dispatch piece will allow the responding unit to receive an electronic copy of the incident (with comments, caller information, location information, etc.). This will also allow the responding unit to make status changes for themselves (enroute, arrived, cleared, etc.), requested report numbers and add comments to the incident. This component is completely independent of other components, but some components rely on this piece to operate.
- ⇒ **In-vehicle mapping** – This component will allow the officer to view an electronic map in the vehicle. This component can be a stand-alone piece, completely independent of any other components and not requiring a connection to any other system. However, without integration to the silent dispatch component, the officer would only have the ability to type in an address to find. When this piece is integrated with a vehicle GPS and the silent dispatch piece, this allows the officer to see a “pointer” indicating the unit’s location and when the unit is assigned to an incident, the map will automatically plot the unit’s location and the incident location on the map & will give driving directions. As the officer drives to the incident, the map will automatically zoom to fit only the unit and the incident location – eliminating any interaction from the officer. These features require an interface to the silent dispatch piece.
 - ⇒ **GPS** – Global Positioning System (GPS) integration is a piece that can be used in two different ways (simultaneously or individually). 1.) This allows the officer to see his location on his mobile map. 2.) This would also allow the unit’s location to be sent to the Communications Center for use with our current Automatic Vehicle Locator (AVL) system. The benefit of AVL is that the dispatcher can see the unit’s location on their map, certain other mobile units can see the unit’s location on their map (such as a supervisor), and this would allow the Communications Center to dispatch the unit that is calculated to be the closest to an incident (the way we currently dispatch EMS – cutting down the response time and no doubt having an effect on fuel savings). Depending on the intended use, this component can be implemented only with the map for the unit to see its own location, or it can be integrated with silent dispatch and the map for the full functionality discussed above.

⇒ **Local wants & warrants** – This component can be “stand-alone”, but must interface to the Spillman records system and requires a mobile connection. This allows mobile users to query local wants & warrants, as well as any other type of locally administered database. This component can be provided by any vendor and if integrated, can automatically run certain queries when a name or address is entered into other application fields. For example, when using the field based reporting piece to create an incident report, the suspect and victim’s names can be automatically checked for warrants. This is currently done by an officer either calling the warrant office on the radio, or having Communications call the warrant office with verbal information to check warrants.

⇒ **State Queries** - This component can be “stand-alone”, but must interface to the State Law Enforcement Division (SLED) system and requires a mobile connection. This allows mobile users to query many state & national databases such as DMV, NCIC, CJIS, etc. This component can be provided by any vendor and if integrated, can automatically run certain queries when a name or vehicle tag is entered into other application fields. For example, when using the field based reporting piece to create an incident report, the suspect and victim’s names can be automatically checked for state & national wanted persons, missing persons, etc. This is currently done by the officer having Communications run the name or tag information through our system and reply with the information across the radio.

Connectivity:

- It is the intent to transmit and receive data through an established commercial air card company. The vendor must supply proof of coverage, network architecture and technology, availability and reliability. They must also show that their system is survivable in event of a natural or man made disaster. A description of GPS capabilities and cost, monthly data usage caps (if any) and cost for overages is requested. Also describe any domestic roaming capabilities.

Installation:

- The requirement for this part of the project is to provide installation of the mounting solution, computer, any external antenna and power unit in the department owned Ford Crown Victoria, Chevy Tahoe or Dodge Charger patrol vehicles. The installation must work with the current configuration which has already been established and the installer must guarantee their work.
